

ZHIIHAO YIN

CREATIVE TECHNOLOGIST

Master of HCI & Game Developer. Dedicated to merging AI Agent workflows with next-gen human-computer interactions.

TEL: 13851862002
MAIL: bruneed237@gmail.com
WEB: yyin.info
DEGREE: M.Sc. in HCI
GRAD: Dec 2025

HONORS & SKILLS

Competitions & Certifications

- 1st Prize, National Final, Computer Network Technology Challenge
 - Grand Prize, National Final, 17th Bochuang Cup Embedded Design Competition
 - 3rd Prize, National Final, 15th Chinese College Student Computer Design Competition
 - 2nd Prize, Liaoning Computer Design Competition
- CET-6 | CET-4 | IELTS 6.5

Skill Radar

- Development & AI
- C# Unity 3D Roblox Lua MCP Servers Agent Skills
- ESP32 (IoT) Web Frontend Python RESTful API MQTT
- Git
- UX & User Research
- HCI User Experience SPSS Analysis NVivo Coding
- Contextual Inquiry Survey Design Data Viz Spatial UI
- Leadership & Interpersonal
- Crisis Management Cross-Cultural Collaboration
- English Proficiency Resilience Project Coord.
- Sponsorship Outreach

EDUCATION

2024.09 - 2025.09 UNIVERSITY OF NOTTINGHAM (UK)

M.Sc. in Human-Computer Interaction | Master's Degree

Core Courses: Gameplay Design, Game Production in Unity, Mixed Reality (MR), AI Interaction Design, Advanced HCI Methods, Design Ethnography, Human Performance Research.

- Academic Project - VR Rhythm Sensing Prototype: Led development of an audio-reactive VR rhythm prototype mapping music rhythm to body gestures. Captured high-precision 3D motion and interaction data to support research.
- Academic Project - Multi-Dimensional User Research: Co-conducted contextual observations, multi-angle surveys, and semi-structured interviews. Summarized 6 interaction paradigms for rhythmic perception, providing crucial groundwork for HCI intelligent space design.

2020.09 - 2024.07 DALIAN UNIVERSITY OF SCIENCE AND TECHNOLOGY

B.Eng. in Internet of Things Engineering | Bachelor's Degree

Ranked 1st | GPA 4.1/5.0

Academic Honors: First-Class Golden University Scholarship recipient.

Core Courses: Embedded Systems, Sensor Technology, Computer Networks, Operating Systems, Cloud Computing, Web Development.

- Academic Project - IoT Production Line Management: Independently built an industrial IoT production monitoring system. Deployed sensors and microcontrollers on ESP32; implemented real-time, bi-directional MQTT data sync; developed a web dashboard using HTML5/CSS3/JS with millisecond-level telemetry updates, maximizing operational oversight.

WORK EXPERIENCE

2026.02 - 2026.05 GAME BUILDER

MiAO Inc. (Shanghai)

Core Responsibilities: Directed Gameplay development for the multiplayer open-world game "Five-Star Citizen", and spearheaded full-stack R&D and AI workflows for "Bombing Blind Shot" on Roblox.

- Gameplay Development ("Five-Star Citizen"): Led core gameplay R&D for a multiplayer open-world game. Engineered responsive player controls, physical interactions, and high-frequency multiplayer synchronization using Finite State Machines (FSM), reducing latency and improving frame rates by 30%.
- Roblox Full-Stack Dev & Custom MCP Service: Designed and maintained a custom Model Context Protocol (MCP) middleware connecting local LLM agents to Roblox Studio; developed APIs for runtime Lua injection and project workspace tree parsing, empowering AI with structural read/write access.
- Proprietary AI Agent Skills: Programmed three tailored workflow skills: 1) Automated Lua Architecture Skill for writing robust logic for high-throughput physical events; 2) AIGC Texture & UI Automation Skill generating and splicing UI textures from natural language prompts; 3) Level Optimization Skill adjusting obstacles based on design feedback, accelerating R&D cycles by 50%.

2023.09 - 2024.02 SERVER DEVELOPMENT INTERN

Shanghai Huicheng Technology Co., Ltd. (Digital Twin R&D Center)

- Core Server Architecture: Maintained the backend of an enterprise-grade digital twin platform and PDM system; optimized database queries and iterations for large-scale Bill of Materials (BOM) trees and resolved concurrency conflicts.
- IoT Scenarios & Twin Gateways: Designed and implemented internal authentication systems and API gateways; created high-throughput real-time IoT telemetry synchronization using WebSocket/RESTful gateways, ensuring sub-millisecond data sync in digital twin scenes.

PROJECT EXPERIENCE

2025.01 - 2025.06 GAME USER RESEARCHER

Games Workshop Group (UK Warhammer HQ Digital Division)

Responsibilities: Led player research for the Warhammer digital ecosystem. Utilized mixed-method studies to optimize experience design and customer retention.

- End-to-End Mixed Methods Research: Surveyed 100+ global active players using multi-language quantitative questionnaires. Performed statistical tests (Reliability, EFA, ANOVA) in SPSS. Conducted multiple semi-structured focus groups, utilizing NVivo to perform hierarchical coding on 200,000+ words of text.
- Disruptive User Insights: Discovered that deep menu hierarchy and steep narrative barriers in the mobile Army Builder app were the primary drivers for 18-24 age group drop-offs, while veteran players lacked outlets for custom match narrative tools.
- Product Impact: Delivered the UX Evaluation & Young Player Retention Report directly to the Digital Director. Influenced flattened hierarchy redesigns and gradual lore onboarding, reducing mobile new-player 3-day churn by 25%.

2025.03 - 2025.06 SOLO DEVELOPER

"Millennium Mist" - Independent Unity Prototype

Responsibilities: Built a highly polished action-shmup prototype as a solo developer to explore gameplay loops combining bullet-hell elements and platforming.

- C# Core Architecture: Architected a stable, clean codebase from scratch, covering responsive weapon modules, level state managers, and visual synchronization.
- HFSM Enemy AI: Implemented Hierarchical Finite State Machines (HFSM) directing advanced behaviors including patrolling, dynamic cover-seeking, and adaptive bullet-hell patterns.
- Level & Combat Design: Hand-crafted 5 distinct levels and a highly customizable weapon system, fine-tuning user feel and game balance.

2025.07 - 2025.10

META QUEST 3 LEAD DEVELOPER & INTERACTION DESIGNER

XR / HCI

"MR Recipes" - Mixed Reality Spatial Interaction Prototype

Responsibilities: Designed and built a spatial interaction cooking assistant for Meta Quest 3 to solve the UX issue of navigating recipe steps during hands-busy cooking.

Spatial Alignment Optimization: Utilized Meta XR SDK to build highly stable spatial environments, precisely anchoring a 3D assistant to real-world countertops with precise collision physics.

User Research & Iteration: Conducted field observations and think-aloud interviews. Addressed key pain points (e.g., wet hand tracking issues, visual occlusion) to iterate on UI anchor stability.

ACTIVITIES

STAGE SUPPORT

Long-term Active

LOGISTICS & STAGE SUPPORT VOLUNTEER

Prominent Music Festivals (Midi, Aranya, Bubble Land, etc.)

Responsibilities: Active volunteer at major festivals, assisting with physical prop construction, stage logistics, and backstage artist support.

Onsite Coordination: Guided backstage talent, coordinated distribution of supplies, and managed crowd transitions to ensure quick stage handovers.

Creative Visual Fabrication: Handled raw material prep, physical assembly, and installation of large art installations and creative stage props.

High-Pressure Support: Assisted technical crews in weather contingencies (e.g., heavy rain, heatwaves) to secure stage wiring, lock down props, and run backup operations.

2022.06 - 2023.04

PRESIDENT OF MAKER SPACE

MAKER SPACE

University Interdisciplinary Technology Association

Operational Leadership: Managed daily operations, advanced 3D printing labs, and hardware schedules for an association of 100+ members, keeping facilities highly secure.

Innovation & Sponsorships: Led 10+ cross-disciplinary hardware projects (IoT, drones). Independently established corporate sponsorships with Alibaba Cloud IoT and JLC for hardware and financial grants.
